Long Term, Reliable Funding for Energy Upgrades

Upgrading facilities to be more energy efficient can bring big savings, but financing such projects can be a challenge. General funds are constrained, and construction budgets are limited for most public agencies.

Establishing a Revolving Loan Fund (RLF) provides reliable, long term financing for energy efficiency projects. It helps public agencies tap savings and claim utility incentives and rebates for a more sustainable future.

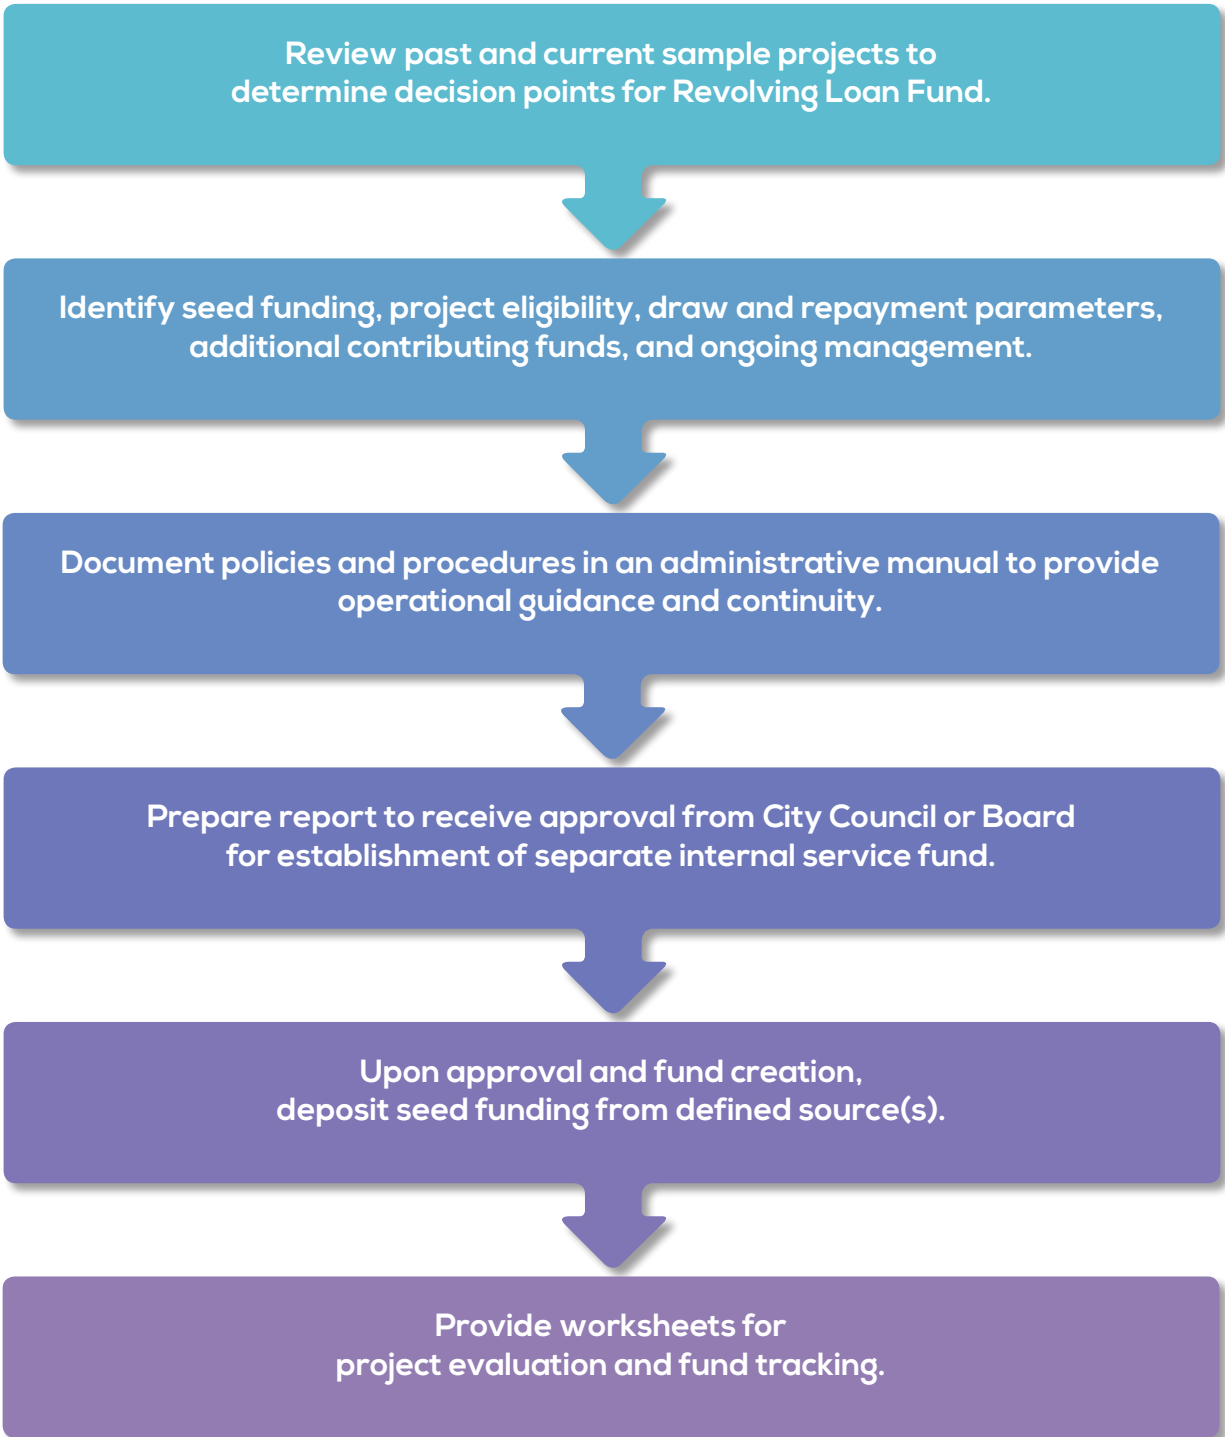

Public agencies have used revolving loan funding for years to finance a variety of projects. The Energy Network can help your agency establish an RLF for energy efficiency projects such as whole building retrofits, lighting upgrades, climate control, street lighting, water systems and more.

The Energy Network can help identify seed funding, determine project eligibility, and prepare documentation, among other things. Contact info@theenergynetwork.com for more information.

The Energy Network takes public agencies step-by-step through the process of establishing a Revolving Loan Fund:

This program is administered by the County of Los Angeles and funded by California utility ratepayers under the auspices of the California Public Utilities Commission.
