

Financing Energy Retrofits

Energy retrofits save money and resources in the long run, but financing energy projects can be a big challenge for most public agencies. The Energy Network is here to help overcome this challenge by offering an array of free services that help qualifying agencies identify and analyze their financing options, and move projects to completion. Financing related services are offered by themselves or in conjunction with The Energy Network's other services, such as technical assistance or Turnkey Project Delivery.

The Energy Network's financing related services offer these benefits:

- **Turnkey solutions** - Staff time and budgets are limited at most public agencies. The Energy Network can take your agency through the entire process with little use of your own staff resources.
- **Tailored solutions** - Agencies have unique projects and needs. The Energy Network can help you identify financing solutions that best fit your needs and circumstances.
- **Paperwork made easy** - Once you decide to finance your energy upgrade, The Energy Network can assist your staff with completing the financing and incentive applications for the project.
- **Energy Project Lease Financing** - Energy Project Lease Financing is a program that offers flexible terms and low interest rates to public agencies for energy efficiency, water conservation and renewable energy projects.
- **Financial advisor** - Public Financial Management, Inc. (PFM) provides financial advisory services to The Energy Network. Upon request, PFM is available, at no additional charge, to work directly with agency staff and officials to ensure proper communication of financial options, structures and obligations.
- **An objective third party resource** - The Energy Network is funded by California utility ratepayers and has no financial stake in the outcome of your projects. Our only mission is to help public agencies complete their energy saving projects.

To find out if your public agency qualifies for services, email us at finance@theenergynetwork.com or call (855) 700- NETWORK. Also visit action.theenergynetwork.com to learn more.
